Cabinet weight	8.8kg
Refresh rate	3840Hz
Best viewing distance	>2.8mm
Features	The thinnest LED tile available for seamless integration in a modular system

KEY FEATURES

▪ ENDLESS DESIGN POSSIBILITIES

The Aluvision 2.8mm LED tile is encased in bespoke aluminum frames designed to fit together seamlessly to create bespoke shapes and wall displays. The back of every panel also features a slot for an SEG fabric or a hard panel to cover the rear of the display, hiding any unwanted cables, making it ideal for a conference or exhibition space.

▪ FLUSH INTEGRATION

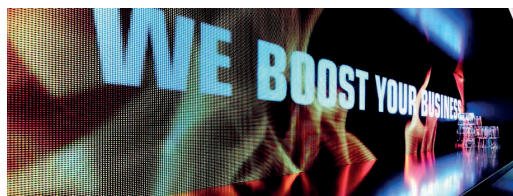

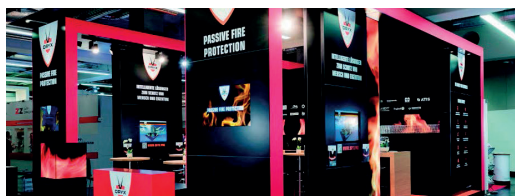

Aluvision tiles fit securely into your design and are fastened with quick tighteners for a beautiful flush finish. The thinnest LED tiles on the market available for seamless integration in a modular system, the panels use magnetic alignment and positioning pins to guarantee precise mounting. The tiles can also be suspended for a flown LED design using bespoke rigging bars.

▪ TOOLLESS INSTALLATION

The interchangeable cast aluminum power box allows for toolless fixation of every panel, with the ability to connect up to 19 cabinets using one power cable and up to 21 cabinets using one data cable. The tiles feature a quick lock system and easy grip ergonomically designed handles to allow for an easy build and set up.

▪ SUSTAINABLE ALL-IN-ONE DESIGN

The Aluvision cast aluminum frames and LED panel are lightweight, sleek and easy-to-install in one design, whilst retaining a strong and bold LED display. With easy-access and removal elements for necessary maintenance, the panel design negates the need to build a one-off bespoke truss system that can never be used again. Instead every LED tile features an integrated frame and protective cover so it can be reused at multiple shows and events and still be unique every time.
